## Certain Guidelines to be followed in Literature Survey

1. Brief introduction about the survey carried out without section numbering.
2. Existing works for the proposed problem statement need to be explained with separate section numbering as and when required.
3. Every survey from a particular source must be cited with references in any one of the following formats:

    - 1 author - Bedford, 2017 (Name of the author, year of publication)
    - 2 authors - Bedford & Caulfield, 2012 (Name of the authors, year of publication).
    - 3+ authors - Davis et al., 2015 (Name of the first author followed by et al., year of publication)
4. Recent years literatures have to be used (preferably Last five years)
5. Constructive criticism and gap identification shall be written clearly at the end of the literature survey chapter without section numbering.
6. The Literature Survey should summarize the challenges and the details of the proposed solution.

## Literature Survey Examples

**Example 1**

M Skrifvars et al (2019) have studied the PLA composite reinforced with flax fibres subjected to various Mechanical tests. The fibres were added in different wt.% (30% & 40%) to analyse its behaviour for Impact strength and it was clear that for 50% fibre addition it showed reasonable improvement in results. Other than fibres, Plasticizer were also added to study the effects but it did not show any positive impact in the test taken. For Tensile test, addition of flax fibre showed greater elongation as well Tensile strength of 600 MPa. SEM images were also examined, which showed that fibres were not well integrated with the PLA material. Degradation of PLA was not shown in GPC analysis as of its bonding with flax fibres[3].

**Example 2**

Mona Bushnell (2022) studied that the available systems are useful for leasing business with less cookies used and are for small scale businesses. This program does not include a banking module or a complete accounts detail that can be used for financial reporting. Lease Financing is the most opted option in today's organization which wants quick and accessible resources that use financing options with simple contract complexity. It typically gives the ownership of an asset or an object to another person over a period. At the end of the contract the asset is either given back to the owner or the user can renew the contract again [7].

**Example 3**

Karan Korpal and Kapil Mohan Mishra (2021), studied that Lease Management System focuses on the drawbacks faced by the users in maintaining and managing the lease of an asset and the cons of using manual system in recording the data of the property. The user needs to spend time over the lease agreements and struggles to balance the lease calculations leading to missed opportunities. The existing manual document methods requires a lot of paper works which consumes time. Today there are many leasing sites available in the market [9].
